

July 24, 2026

Dear, Resources (Manager) Human
Living4Learning, 10 Ross Hall Blvd, Waterloo, ON N2J 3Q3

Dear Ms. Jones,

Here is the proposal that my team at the Human Resource Department of Living4Learning was assigned to complete. The proposal explains how implementing an online recruitment strategy would be beneficial to our company and provides a detailed walkthrough of experiences other organizations have had when implementing this strategy, the potential complication that could arise, why it is an appropriate solution for Living4Learning, steps to implement this strategy, and how the success of this strategy can be evaluated over time.

We have begun this proposal by listing the contents. We have tried our best to keep all the information organized. In the event, you need to go back to a specific subject of concern in our proposal you can do so by using our contents page and easily finding answers to specific questions.

The executive summary does a great job of summarizing the sections of this proposal and voicing the main ideas behind every part. It thoroughly explains the experiences other companies have had, potential complications, online strategy, the cost associated with strategy implementation, and evaluating the success of this strategy. The concerns are clearly explained, and you will find our wording is easy to understand, making this proposal straight forward and useful.

Following the executive summary, you will find the introduction. Our introduction begins by addressing today's current global circumstances, mainly the COVID-19 Pandemic. It also makes a strong point arguing that for Living4Learning to do well during these times the need to implement the online recruitment strategy is of the highest importance.

When implementing an online recruitment strategy and using our proposal to help guide you through it you will find that each of our 5 categories of information is organized by clear paragraphs, numbers, bullets, and/or headings to help organize the information given and make it easier to understand.

Lastly, our conclusion and recommendations section closes our proposal, leaving you with online recruitment sites to try recruiting employees from, social media platforms to try hiring from, and a summarization of all the benefits and convenient results that come from implementing an online recruitment strategy.

We hope you will find this proposal useful. If you have any questions, please feel free to contact the HR Department.

Sincerely,

Romaisa Ahmed
Human Resource Department

EXECUTIVE SUMMARY

This report aims to analyze how beneficial using online recruitment strategies are. To be specific, using platforms that are already available as a resource to post job postings is one of the easiest ways to find new employees. In unprecedented times like these, as companies, we should move forward and use technology to our advantage.

1. Experiences other Companies have with Online Recruitment

It is always important to analyze the success and hardships of the other companies that have used this strategy. American Laser Ltd. and Lidl have both had success stories with implementing an online recruitment strategy. Many businesses have opted to use online recruitment especially during these unprecedented times of COVID 19.

- American Laser Ltd

This is a Canadian esthetic medicine clinic chain that is using online recruitment. The pandemic restrictions have forced the company to remotely recruit and onboard personnel. They have implemented this through online training and video calls. The company recalls that it is very efficient hiring online as it has cut the time by half. Due to the efficiency, the company now uses

its clinics remotely and only requires face-to-face time with personnel applying for executive positions at the company.

- Lidl

This is a German International supermarket store with over 10,000 locations across Europe and the U.S. Due to the pandemic, it has made it very difficult for every individual to do everyday tasks because it is unsafe. Grocery stores have had an increase in demand filling front-line positions so the stores can meet the public's needs during the crisis. They have hired over 1000 temporary workers to help maintain traffic and demand and have conducted interviews through video conferencing to save time.

2. Potential Complications

Many complications could arise with this online strategy. Some issues that could arise are competing with other employers for the same talent pool. Another complication could be that it is very hard to keep all the information organized when there are a large number of candidates who are applying. Furthermore, it is also important to consider the best possible experience for the candidates. There is also unconscious bias created when recruiting online especially which results in less diversity in our company.

The complications could be avoided by finding a niche and selecting candidates that fit this niche. Furthermore, to hire fairly and diversely when looking through applications for your company, you should have "structured interviews" at hand. Another complication that can happen is that we need to go above and beyond compared to other employers.

3. Online Strategy for Recruitment

Using online websites will allow us to reach out to new candidates effectively. Furthermore, online resources allow the company to keep track of the applications in a very efficient way. It is beneficial as it saves time and money. The goals of online recruitment are the same as any other kind of recruitment strategy, and it is to find the ultimate employees. One of the most beneficial things of online recruitment is that we can select and interview candidates remotely and choose the right fit for our company. Using social media platforms like Instagram and Facebook should be considered as they are very cost-efficient.

Living for Learning has previously utilized online platforms to advertise new job prospects. By using online recruitment websites, we can reach a wider range of people than compared to traditional recruitment ways like through newspapers. Everything is also easily accessible for the company to see the resume, references, and employment history of the applicant as well.

4. Strategy Implementation and Cost Associated

Hiring online has become a new normal for every company now. It is easily accessible as the world humans live in is immensely online. In this technologically advanced era companies should use platforms such as Indeed and LinkedIn to their advantage. On online platforms it allows companies to show and advertise new job prospects. This allows our job posting to be

seen by a wide range of people as well and it saves a lot of time rather than using traditional things like newspapers. Recruiters are connected directly to new employees as well.

The costs of hiring online are immensely cheaper than implementing in-person recruitment. For instance, Indeed you can post advertisements for free, and you have the option to post sponsored posts starting at \$5.00 per month. This is only a fraction of the price of what it would be to hire more employees to hire other employees. If we did have employees working, we would have to pay them at minimum wage and have at least 4-5 people working as well. Besides, we would have to also provide them with benefits and incentives to do their jobs.

5. Evaluating Success of Strategy

There are many advantages to online recruitment like cost-effectiveness, reaching a variety of different people, and many more. There is a list of criteria that we should consider in evaluating the success of this strategy.

The criteria include:

- If online recruitment results in a better talent yield compared to other types of recruitment
- If the company can see an increase in skilled workers who the requirements of positions
- The company would need to develop relationships early in the online recruitment process

One of the most ideal ways to meet said criteria is to use analytics and data collection from all the avenues we choose to use (whether its email or websites). Overall using the collection of data and analytics provided by the Living4Learning website and websites that are typically used for online recruitment along with a ratio of the talent garnered using the online recruitment method would be the best way to measure the criteria's success.

IMPLEMENTING ONLINE RECRUITMENT STRATEGY

INTRODUCTION

With the COVID-19 pandemic, this has quickly changed how every organization is attracting, recruiting, and retaining employees on their virtual teams, making remote work the new normal. At Living4Learning to deal with these extraneous circumstances, careful thought and consideration must be taken to ensure that recruitment is conducted in the best way possible.

When considering a recruitment strategy, we want to ensure that we are promoting a satisfactory organizational culture. With that said we want to ensure that we hire candidates that will reflect the values shared by Living4learning. Online recruitment is a recruitment method involving sourcing candidates on the Internet. Most recently, recruiting on social networks has received the most attention (Recruiter 2020).

The purpose of this report is to analyze and evaluate why online recruitment is the best recruitment strategy to implement, this will be illustrated through consideration of recommendations the HR department has received, and additional research. This report will also explore other companies who have utilized online recruitment, potential complications, the costs of this strategy, and finally, how to measure success using this strategy.

In preparing this report, the HR department has utilized internal resources including an HR Snapshot, HR Onboarding Millennials, Hire Locally, and Disruptive Talent Acquisition Strategies. We decided on 4 questions that we could explore through this proposal to cover the potential benefits and complications that could arise from online recruitment.

Upon analyzing these resources, we then wanted to explore other companies that have used online recruitment and compare their use of online recruitment and traditional recruitment strategies to determine its viability. Additionally, we investigated any potential complications that could arise when implementing this strategy, as well as analyzing L4L's internal recruitment budget. To further suggest this strategy's potential, we researched why this is an appropriate strategy given L4L's current needs. To determine how to implement this strategy we investigated disruptive talent acquisition strategies to figure out what tools would be necessary. Finally, we wanted to wrap up the proposal by analyzing how to evaluate the success of implementing this strategy. This allowed us to create criteria for success and how to measure this success. By exploring various areas of online recruitment this has allowed the HR department to decide that online recruitment would be the best strategy to implement.

1.0 Other organizations experience using online recruitment

When deciding whether to implement online recruitment for our company we must analyze the success and hardships of other companies that have implemented this strategy before us. In that case, we will be analyzing the successes and hardships of both American Laser Ltd., and Lidl. Both companies have successfully implemented online recruitment to hire the right talent pool.

During the COVID-19 lockdown, restrictions were put into place to prevent the spread of COVID-19. These restrictions resulted in many businesses closing their doors or shifting to working remotely. Many companies found remotely recruiting and onboarding to be more efficient and effective than traditional recruitment in terms of time and resources spent. This caused companies to utilize this method permanently regardless of the crisis.

American Laser Ltd. is a Canadian esthetic medicine clinic chain that is currently using online recruitment. During the initial phase of the COVID-19 lockdown, restriction caused the company to remotely recruit and onboard personnel. American Laser Ltd. shifted to working remotely and recruiting and onboarding personnel through online training and video calls (Manela 2020). Roni Blankleder, CEO of American Laser Ltd., stated in an interview with Calcalist, that “shifting to a remote process has cut down the time needed to recruit an employee by 50%” (Manela 2020). Due to the efficiency of online recruitment, American Laser Ltd. now recruits all personnel for its clinics remotely and only requires face-to-face time with personnel applying for executive positions at the company (Manela 2020).

Lidl is a German international supermarket store that has over 10,000 locations across Europe and the USA (“About Us” Lidl.com). COVID-19 hit hard in the USA making it very risky and hard for people to leave the safety of their houses without taking the risk of being infected. Due to the pandemic, grocery stores had an increase in demand for filling front-line positions so the stores can meet the public’s needs during the crisis. In an article written by SHRM, The Lidl stores in the USA hired over 1000 temporary workers to keep up with the high traffic and new procedures implemented due to COVID-19 (Maurer 2020). Recruiters who were working on corporate-level strategic projects have been given the assignment to focus on staffing stores (Maurer 2020).

Lidl had to adapt to a quickened pace for recruiting and onboarding new employees to keep their stores running functionally. Chief Human Resource Officer, Eoin Byrne, stated: “If you apply to a Lidl store either in-person or online on a Wednesday evening, you will be able to start on Monday morning” (Maurer 2020). By conducting interviews over videoconferencing and cutting out certain steps of the hiring process the company saves time and can staff their stores effectively. Although online recruitment does make the hiring process easier there are downfalls. To staff their stores quickly, Lidl had to allow their employees to start working without getting interviewed by a minimum of 2 people and allowing new hires to start before processing their background check (Maurer 2020).

1.0.1 Why do companies utilize online recruitment vs. traditional recruitment?

Online recruitment is the process of using the Internet to actively seek out and recruit talented candidates for an organization (Recruiter 2020). Using electronic job boards, social media, business networking sites, etc., finding a job has become very efficient, easy and less time-

consuming. Traditional recruitment refers to the process when people apply for jobs using traditional paper applications and resumes and are interviewed face-to-face.

Companies utilize online recruitment versus traditional recruitment nowadays due to efficiency and effectiveness. Nowadays everything is easily accessible using the Internet. Online recruitment is a great way to expand the search for the right candidates for the job with plenty of advantages. By using online recruitment companies have found that the number of applications received is significantly higher, expanding the search in finding qualified candidates (Blakely-Gray 2017). Online recruitment saves a significant amount of time for both the company and the applicant. For example, when conducting an interview, a time is scheduled for the interviewer to meet and screen the interviewee. Through online recruitment, interviews are held through a video-conference platform such as Zoom, Webex, or Skype. By using these video-conference platforms both the interviewer and interview can attend the meeting from the comfort of their home and on time by saving the commute time (Blakely-Gray 2017).

Overall, online recruitment is a huge advantage to companies and should be implemented by L4L. During these uncertain times with unemployment at its highest, online recruitment is the best option for the continued growth and success of this company.

2.0 Potential complications that could arise through online recruitment

2.0.1 The Potential Complications

1. When implementing online recruitment many complications could arise. There are difficulties that may arise when hiring, due to a large pool of candidates. Not every candidate to apply will be qualified. This can make going through all the applications a bit tedious.
2. Competing with other employers for qualified candidates can be tough. Especially since “candidates with hard-to-find skills are often considering several jobs offers at the same time” (Workable 2020).
3. When using “data-driven recruitment” it can be hard to keep all the information organized, especially at larger numbers of recruitment. Manual work on spreadsheets is “prone to human error” (Workable 2020).
4. “Building a strong employer brand” can be tough and complicated due to the different things it can consist of. The bottom line is to make sure of “a positive candidate experience to promote your culture on social media” (Workable 2020).
5. It is important to be “ensuring a good candidate experience.” Since the way you treat the candidates during the hiring process will be how candidates get a sense of how you will treat them after they have been hired. This will affect their decision to accept the position you offer them (Workable 2020).
6. Recruiting with diversity in mind can be an unintended challenge you face due to “unconscious biases” (Workable 2020).
7. To be efficient in hiring the recruiting team needs to be quick, coordinated, and have good communication from all members to prevent any confusion or delay. Oftentimes, other “administrative tasks” can

“Take away valuable time that recruiters could have in coordinating the hiring process” (Workable 2020).

2.0.2 Can Complications Be Avoided & 2.0.3 How to Deal with Complications

1. Having a relatively large number of applicants to choose from is more likely through online recruitment, but a high level of unqualified applicants can be avoided if you are more specific about who you are looking to hire. Workable Technology Limited suggests “knock-out’ questions” and to “Give a concise view of the role” in the advertisement. Doing this will filter out unqualified candidates and separate them from your possible hires (Workable 2020).
2. When competing with other employers for qualified candidates you should go above and beyond in comparison to the offers your competitive employers are offering these candidates. What we mean by that is finding out the interests and what they appreciate in a job. Then use this information to give them not just a job offers, but a job offer they would find appealing in accordance to their pet-peeves, hobbies, location, etc. (Workable 2020).
3. When using “data-driven recruitment,” information can be kept organized and be easy to keep track of if you use “recruitment marketing software,” for example, Google Analytics (Workable 2020).
Workable Technology also points out “you don’t need to track every recruiting metric there is.” You should communicate with upper management and settle on keeping track of what is logical and important to your company. (Workable 2020)
4. When “building a strong employer brand” you should make sure our employees feel heard. Workable suggests, “always reply (courteously) to online reviews – bad and good. Give your coworkers the means to tell their story about their work and what they like.” Also, just be a desirable, good, and fair employer (Workable 2020).
5. To ensure “a good candidate experience,” Workable suggests to “set expectations for communication” between you and your candidate for when they can expect an answer from you. You should also use alarms, reminders, and emails that help you keep your word for the dates you have set to be responsible for (Workable 2020).
6. To hire fairly and diversely when looking through applications for your company, you should have “structured interviews” at hand. Another tip to help hire unbiasedly would be to have a “‘blind’ hiring software,” which makes it hard to look at the candidates for anything other than their qualifications (Workable 2020).
7. To have an efficient hiring team that is quick and coordinated “consider investing in an ATS that helps your team coordinate and see the status of the hiring process at a glance.” The team will be able to evaluate each other’s work and add comments with helpful suggestions.

3.0 Why is online recruitment an appropriate solution for L4L?

3.0.1 Is this recruitment strategy better than other recruitment strategies?

According to a recommendation given to the HR Department from intern Taniya Khan from the R&D department has recommended that we promote jobs at Living4Learning on the internet to save promotion cost. To implement promoting jobs at Living4Learning, we can use job boards

including LinkedIn, Indeed, Zip recruiters (Khan 2020). Utilizing these sites would allow us to reach out to candidates effectively and keep track of applications. Using these sites for online recruitment is useful as these will help you save time and money at the same time with high convenience.

The primary goal of Internet recruiting is the same as traditional recruiting: to find suitable talent to employ. However, this emerging recruitment tool is most frequently called upon for a quick employment solution if, after searching the corporate database for candidates, a recruiter is unable to find suitable talent (Recruitment 2020). This is a viable option as we can, select and interview candidates remotely and choose the right fit, and the software used on these sites makes the entire procedure organized, and safe (Khan 2020).

Recruitment can be a costly process, so being able to instill cost-efficient approaches will be the most ideal for the HR department. Ms. Khan has also stated that another way we can use the internet to reach out to candidates is using social media. Using social media will help us to get a bigger outreach for vacancies with a cost-effective approach (Khan 2020). We can consider using platforms like Instagram, and Facebook. If we use social media to promote vacancies at Living4Learning we will be able to connect with potential applicants by just spending around \$5 a CPM (cost per thousand impressions).

3.0.2 Has online recruitment previously been used at L4L?

In the past, L4L has utilized an online advertisement/application system which helped help the HR department to streamline departmental assignments (Marks 2020). Since, online recruitment has benefited the company on a smaller scale it is fair to assume that it would also be useful in the recruitment of new learning creatives. Ideally, when considering recruitment strategies, we must take into consideration the potential effect this may have on current L4L employees. Ms. Khan from the R&D department has addressed that the use of online recruitment will not affect current employees in terms of downsizing because they are performing efficiently, and the problem we are facing revolves around needing more employees to assist the company with the work burden.

By creating an online listing for L4L we can ensure that the position is seen by a larger variety of candidates than traditional newspapers and is also a likely indicator that the applicant has at least basic computer skills which would be useful for various departments (Recruitment 2020). When browsing the profiles of potential employees you should be looking at references, employment history, and the overall quality of a resume. Since most applications and resumes are listed right on the web it also cuts down on the paper documents you need to keep track of in the office. Additionally, online recruitment can also be done through a company website (Recruitment 2020). Many businesses now offer an "employment opportunity" or career page section and have created an online application, which is sent directly to human resources personnel. These applications can be filed until an available position is opened and can be a great way to create a database of available workers before they are even needed.

4.0 How can this strategy be implemented?

The society we live in is extremely technologically advanced. As a society, we have grown so much that the internet has become a part of our identity. With that being said, “Online recruitment is a recruitment method involving sourcing candidates on the Internet,” (recruiter.com). The internet is one of the quickest and efficient ways to seek new employees as it saves a lot of time. The HR department’s way of recruiting is ever-changing because of the times we live in. We must use the internet to our advantage and seek suitable employees.

4.0.1 What will the costs be to implement this strategy?

The cost of hiring candidates online is immensely cheaper than implementing in-person recruitment. Moreover, online job postings are a great way to reach out to more people because sources like Indeed and LinkedIn are very popular career websites. With Indeed, you can post advertisements for free, and you have the option to post sponsored posts starting at \$5.00 per month. This is a fraction of the cost that it would take to have employees sift through hundreds of resumes to find potential candidates. By using an online website, you can have a system the applications go through that can filter through the resumes and pull out the best ones for that position.

For example, if we did have our employees doing this recruiting process, we could have to have at least 4-5 people working at a minimum wage or even higher which adds to the cost. You would also have to provide these employees with benefits and such and online recruitment would just eliminate this cost.

4.0.2 Do we need to create an online recruitment system?

We don’t need to create an online recruitment system as there are many sites on the internet that provides us with a platform to showcase our new job prospects. Social networking recruitment tools such as LinkedIn and Indeed.com are some of the many platforms we can use to advertise new openings for jobs. “Industry sites typically have databases of resumes and direct discussion forums that can facilitate direct electronic contact with a candidate,” (recruiter.com). This also will be an efficient and effective way to recruit many individuals. On websites such as LinkedIn and Indeed.com, our company would post available positions on job boards. This allows our job posting to be seen by a wide range of people as well and it saves a lot of time rather than using traditional things like newspapers. Recruiters are connected directly to new employees as well.

We can also in addition to posting on websites such as Indeed.com and LinkedIn we can have online recruitment on our company website. “Many businesses now offer an "employment opportunity" or career page section and have created an online application, which is sent directly to human resources personnel,” (recruiter.com). This is also another easy way to connect employers to new employees and cuts down a lot of the process.

4.0.3 Other necessary tools.

On the Living4Learning Human Resource Package, there is an article about Hiring Locally and it states “Local candidates are easy to reference. There is a high chance you will have a pre-existing relationship with one or more people who can provide an honest reference on a local

candidate.” By hiring locally, there is a greater probability that one will get true and real reviews of the candidate. That way the hiring department can recruit the best candidate who fits the position. This is not a tool, but it is something to consider when we post a job listing online.

Another tool that is necessary to successfully implement this online recruiting strategy is tailoring our search to a niche and providing them with the adequate information needed. For instance, this could mean that “keeping things brief, making things interactive, working in teams, etc” (Onboarding strategies to supercharge millennial employees). This is a suggested tool to use to capture more people.

5.0 How can the success of implementing this strategy be evaluated?

5.0.1 What will the criteria for success and failure entail?

Online recruitment may offer many advantages like cost-effectiveness, a larger audience yield, and flexibility, but without first ensuring that it is/will be successful the advantages cannot be fully realized. The main criteria for success of the online recruitment strategy will be, whether it results in a better talent yield than other recruitment methods (i.e. job fairs and physical job postings) and whether we can successfully appeal to the niche. Another criterion for success will be whether Living4Learning sees an increase in skilled workers who meet the requirements of the positions as according to a 2015 survey by the ManpowerGroup “32 percent of employers in the United States maintain that they are experiencing a shortage of talent, and the shortage is negatively affecting business performance.” (Cairns, 2015). Some of the negatives to other methods include lack of technical competencies, lack of available applicants/no applicants, undesirable geographic destinations, and reluctance to relocate. (Cairns, 2015). Many of these issues can be counteracted by utilizing online recruitment effectively.

The final bit of criteria that Living4Learning will need to succeed with is developing relationships early in the online recruitment process as with online recruiting there is less of a personal connection for the applicants so engaging them (especially those with the qualifications and talent needed), as seen in Cairns’ article, the low-cost method that many companies neglect is the automated reply upon applicant submission. (Cairns, 2015). Since this message is typically the ONLY form of communication received by the applicant (unless there is a rejection email) it should be more personalized (especially for online recruitment) as it is typically impersonal and highly structured which may make applicants feel alienated. Even something as simple as an email stating the company's goals or policies and what the company promotes in the workplace can lead to a much better reception (especially if these goals and policies align with the applicant’s view) of the business considering most applicants’ interest dwindles upon applying. (Cairns, 2015).

Ultimately, the criteria for success and failure will be whether the online recruitment method leads to an increased yield of talent, whether it can appeal to the niche, whether the method provides increased access to skilled and engaged workers, and whether Living4Learning successfully captivates and engages the applicants early in the recruitment process to maintain their interest.

5.0.2 What is the most ideal way to measure these criteria?

The most ideal way to measure these criteria would be by utilizing analytics and data collection from the different avenues we choose to use, whether it be through email or websites. A good way to see how many applicants we get vs. how many we would hire for the position is to separate those who do not meet requirements and those who do and simply do a count of each side and develop a ratio of the two sides. This could tell us if the method worked in attracting skilled and talented individuals. Beyond this, the ratio could also be compared to other methods utilized in the past by Living4Learning to see how online recruitment benefits/does not benefit the company. Quantifying and measuring the effectiveness of the response of applicants' receiving more personalized emails upon applying would be very difficult; there are only metrics to say that it is effective. The only way to gather results on the effectiveness of engaging the applicants would be via a survey and even then, the results may be biased.

All-in-all, we believe the collection of data and analytics provided by the Living4Learning website and websites that are typically used for online recruitment along with a ratio of the talent garnered using the online recruitment method would be the best way to measure the criteria's success.

CONCLUSIONS AND RECOMMENDATIONS

In conclusion, the purpose of this report was to analyze and evaluate why online recruitment is the best recruitment strategy to implement at Living4Learning. The department decided collectively that online recruitment is the best option for L4L and therefore completed this report with real life examples, and research needed to support why it is the best option. This report also explored other companies who have utilized online recruitment, potential complications, the costs of this strategy, and finally, how to measure success using this strategy. The best way to determine whether a strategy is good for your company is by determining whether it has been successful for other companies. Both American Laser Ltd. and Lidl US. were used as examples of successful companies that started to implement online recruitment within a short period of time due to COVID-19. The analysis continued further as to what reasons cause companies to prefer online recruitment versus traditional recruitment. When analyzing the reasons for why the companies switched to online recruitment and reading about their success it can be determined that this is also the best strategy for L4L. When considering complications that could arise from implementing this strategy the department found that no matter the problem there is a solution and a way to avoid the complication from arising as well. Many companies have implemented this strategy and when analyzing their success and complications the pros of online recruitment outweigh the cons. Using job boards like LinkedIn, Indeed, Zip recruiters, etc. we can reach more people, and these sites are also very useful for saving time and money with the bonus of being highly convenient. Recruitment tends to be an expensive process so having the ability to instill cost-efficient approaches will be ideal. Approaches like social media platforms (Facebook, Instagram, and Twitter) would help promote vacancies at Living4Learn with a cost of \$5 a CPM (cost per impression). Online recruitment options also lead to less paperwork to deal with and can also be done through the company website thus sending applications directly to human resource personnel. The online recruitment strategy is much more

cost-effective than in-person recruitment and Living4Learning doesn't necessarily even have to create an online recruitment system saving even more time and money. Tailoring our search to a niche and providing applicants with adequate information would also be a beneficial tool. Finally, the main criteria for success of the online recruitment strategy will be whether it results in a better talent yield, more skilled workers, whether we appeal to the niche we want, and whether we can engage the applicants and keep them interested. We can measure the criteria by creating a ratio of how many applicants were qualified and that we would consider hiring the number of applicants who were not qualified, or we would not consider hiring. We could then compare this to previous methods and see just how successful the online recruitment method was. It is recommended that these steps are considered very heavily during the online recruitment process as following what has been laid out has the potential to yield very positive results for Living4Learn during COVID-19 and otherwise.
